## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

**Group I**, claim(s) 1-5 and 18, drawn to a method of enhancing expression of an exogenous polynucleotide sequence in a plant, comprising administering to the plant a virus selected capable of suppressing gene silencing in said plant .

**Group II**, claim(s) 6-11, drawn to a method of identifying a gene silencing agent. Comprising inoculating a plurality of transgenic plants with a plurality of virus isolates.

**Group III**, claim(s) 12-17 and 19-20, drawn to a method of producing a molecule of interest.

**Group IV**, claim(s) 21-25, drawn to an article of manufacturing comprising a container including a virus capable of suppressing gene silencing in a plant and a package material.

Note: claims 22-25 are objected to because they attempt to limit a method of claim 21. However, claim 21 is direct to a product, not a method.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the inventions of Groups I-IV is a virus capable of suppressing gene silencing in a plant. However, such technical feature is anticipated by Brignetti et al. (1998, EMBO J. 17:6739-6746) or Voinnet et al. (1999, PNAS 96:14147-14152). Brignetti et al. teach the suppression of silencing of a GFP transgene in transgenic *Nicotiana benthamiana* plants that were mechanically inoculated with potato virus Y, cucumber mosaic virus, or recombinant PVX-PVY or PVX-CMV vectors. Viruses systemically infected the plants (pages 6739-6743). Voinnet et al. teach the suppression of silencing of a GFP transgene in transgenic *Nicotiana benthamiana* plants that were mechanically inoculated with a variety of plant viruses. The viruses systemically infected the plants (pages 14148-14151). Therefore this technical feature does not constitute a special technical feature as defined by PCT Rule 13.2, because it does not define a contribution over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
